**Example of other trucking or useful apps that incorporate at least one feature we hope to include:**

- Motive Driver (ex KeepTruckin, iOS/Android) (FMCSA approved)
- CamScanner (PDF scanner and storage)
- BigRoad Trucking Logbook (iOS/Android)
- XBE - Horizontal Construction (Web/iOS/Android) (actually used by Superior Bowen in Kansas City)
- QCMobile (Web/iOS/Android) (is FMCSA approved and recommended)
- Square Invoices: Invoice Maker (Web/iOS/Android)

**After researching several other invoicing applications, here are some of our key takeaways**

Handling Data:
- Track invoices, clients, and user information
- Make features Federal Motor Carrier Safety Administration (FMCSA) compliant for digital record keeping
- Connect to FMCSA databases for carrier info and ensuring DOT current registration and safety performance info

User Interface/ User Experience:
- Fast to load (find right balance between local storage and loaded info)
- Easy to use: small learning curve, clear wording, intuitive buttons
- Make all pages accessible from a central location
- Use large text and buttons to avoid any chance of accidental presses

Desirable Features:
- Ability to use app offline (for example, no data coverage)
- Portability (Web app version attractive for unsupported mobile OS versions or phones with low storage)
- Department of Transportation (DOT) compliant
- Display data analysis graphics, so that users can track their progress
- Importing contacts on the mobile app
- Ability to generate a printable invoice
